

Yukai Zhou (周宇凯)

[Personal Website](#) [Google Scholar](#) [frank-thou](#) zhouyk12023@shanghaitech.edu.cn

Education

PhD	ShanghaiTech University, Computer science - GPA: 3.57/4.0 (overall), 3.69/4.0 (major) - Selected Course: Algorithm Design and Analysis (A+), Project Practice for Deep Learning, AI for Science and Engineer, Trustworthy Machine Learning	Sep. 2023 - Present
BS	ShanghaiTech University, Physics	Sep. 2019 - Jun. 2023

Research Experience

Beyond Jailbreaks: Revealing Stealthier and Broader LLM Security Risks Stemming from Alignment Failures <i>Yukai Zhou</i> , Sibe Yang, Wenjie Wang Identify one unexplored realworld LLM safety issue, and construct the first dataset & attack methods within this domain. See our Project Website for more details.	Feb. 2025 - Jun. 2025
Don't Say No: Jailbreaking LLM by Suppressing Refusal <i>Yukai Zhou</i> , Jian Lou, Zhijie Huang, Zhan Qin, Sibe Yang, Wenjie Wang ACL 2025 Findings Propose one novel and powerful learning-based attack. Address several existing issues such as "Loss-ASR Mismatch" Problem and trustworthy evaluation metric.	Jan. 2024 - Feb. 2025

Projects and Contests

JailbreakBench , secure the first place in the white-box attack leaderboard	Sep. 2024 - Oct. 2024
The Competition for LLM and Agent Safety 2024 NeurIPS 2024 Contest Secure the best white-box method, and overall the second best* (before re-evaluation).	Sep. 2024 - Oct. 2024
CCF LLM safety challenge contest track 1: General purpose LLM hijack Contest website , three-person team from ASPIRE Lab Design and implement the LLM hijack optimization-based workflow and dataset.	Jun. 2024 - Aug. 2024
KG4SLvis: A Visual Analytics Approach to Illuminate KG4SL Predictions CS286 course project within a four-person group - Design and implement the full-stack visual analytics system to enhance the interpretability and performance of Synthetic Lethality prediction model (KG4SL). - Refine the KG4SL model using insights got from the system, conduct experiments to validate its effectiveness and robustness.	Nov. 2023 - Jan. 2024
Visual Prompt Tuning Optimization Investigate the initialization methods regarding the visual prompts, which falls into the Parameter-Efficient Fine-Tuning (PEFT) methods category.	Sep. 2023 - Nov. 2023

Award, Service, and Additional Experience

Reviewer , serve as ACL ARR 2025 reviewer	Feb. 2025 - Aug. 2025
Guest Lecturer , to give a lecture upon jailbreak in course CS246 (Trustworthy ML)	2025.4.2
Outstanding Student , awarded to the top 10%	Sep. 2023 - Aug. 2024
Teaching Assistant , Introduction to Information Science and Technology (SI100b)	Mar. 2024 - Jun. 2024
Mentor of Dadao college , Mentoring the undergraduate students of Dadao college	Sep. 2023 - Jan. 2024
